EDUCATION

2023 | **National Taipei University of Technology**
2025 | **Master of Interaction Design**

2012 | **Fu Jen University**
2016 | **Bachelor of Information Management**

ENGLISH

TOEIC 840 points

GEPT High-intermediate

SKILLS

Figma
Photoshop
Illustrator
After Effect
CSS/HTML

ABOUT

A UIUX designer with about 9 years of experience, holding a master's degree in Interaction Design from National Taipei University of Technology. I currently work at Bahwan CyberTek, focusing on product proposals and system design. Previously at Mood Technology, I was responsible for the MOOD App UI design, covering iOS/Android interfaces and campaign projects. Proficient in Figma, Photoshop, Illustrator, and HTML/CSS, with solid experience in EDM design, corporate identity (CIS), and icon design.

EXPERIENCES

2024.09 | **Bahwan CyberTek • UIUX Designer**
Now

- Contributed to product proposals for a leading tech manufacturer and the UIUX design of an enterprise BPM system

2023.04 | **MOOD Internet Co., Ltd. • UI Designer**
2024.01

- Redesign and redefine the MOOD App UI and create new IP character.
- To promote the Valentine's Day event, design a new feature for anonymous chat rooms.

2022.07 | **Gogoro Co., Ltd. • Visual Interface Designer**
2022.11

- One week after the launch of the campaign, more than 10,000 cards have been successfully added.

2019.07 | **ASUS Cloud Co., Ltd. • UI Designer**
2022.07

- Landing page successfully reached 1 million revenue within one month of launch.
- Reduced customer complaints rate by 80% after product function optimization.

2018.03 | **Lion Information Technology Co., Ltd.**
2019.07 **UX Designer**

- Homepage successfully added 500,000 new users within three months after redesign.

AUTOBIOGRAPHY

Hello, I am Janet, a UIUX designer with about nine years of hands-on experience. I currently work as a UIUX Designer at Bahwan CyberTek, and in 2025 I earned my master's degree in Interaction Design from National Taipei University of Technology. During my undergraduate studies in Information Management at Fu Jen Catholic University, I developed a strong interest in digital interface design and proactively took design courses beyond my major. Combining a background in programming and information systems with design aesthetics became my key competitive advantage in the workplace.

My current company is a multinational consulting firm, where I contribute to a range of enterprise proposals and system designs, including product proposals for a leading technology manufacturer and the UIUX design of a large enterprise's internal BPM system. My work spans the full process from proposal concept and information architecture to interface design. Working in a cross-national team, I collaborate with overseas colleagues in English on a daily basis and have gained solid cross-cultural collaboration experience. As these projects are bound by NDAs, I would be glad to present them in person during an interview. Prior to this, I was a UI designer at Mood Technology, responsible for the MOOD App UI design covering iOS/Android interfaces and campaign projects. My past work includes the MOOD App redesign, design system development, new IP characters, and the Yue Lao matchmaking campaign; the Gogoro App homepage redesign and marketing campaign game UI; ASUS Cloud website development and redesign, along with one-page campaign sites; the Lion Travel homepage redesign; and the Yung Yuan–Fu Jen Breast Cancer Foundation website. I am proficient in Figma, Photoshop, Illustrator, and HTML/CSS, with extensive experience in EDM design, corporate identity (CIS), and icon design.

After years in the industry, I returned to school in 2023 to pursue a master's degree in Interaction Design at Taipei Tech, seeking to ground my design practice in stronger theory and research, and graduated in 2025. In my thesis, "The Effects of Augmented Reality Interface Transparency on Visibility and User Satisfaction," I designed experiments on the transparency parameters of AR interfaces and validated their effects on information visibility and user satisfaction through user testing and quantitative analysis. This research training transformed me from a designer who relies on experience into one who can support design decisions with experiments and data.

"There is no best, only better" is my design philosophy. Years of experience have taught me that beyond core skills, a designer must continuously use data and feedback to refine the user experience, accurately grasp user needs, and clearly communicate the meaning and value of design.

Looking ahead, digital media has become an indispensable platform for absorbing new knowledge, and a user's first impression of a company or product always begins with its visual interface – which is why I believe design plays a vital role. Driven by my passion for design, I plan to keep advancing in UIUX and front-end development, guided by four principles: observation, questioning, thinking, and communication. I strive to digest and consolidate what I learn, share it with the people around me so we grow together, and ultimately become a well-rounded full-stack designer.
